Chad Koslovsky

Product engineer with an operator's perspective

Milliken, Colorado · chad@koslovsky.xyz

Senior Software Engineer, Digital Engineering | True Anomaly

01 PROFILE

I like getting close to the people using a system, understanding the handoffs, and building something I can keep responsible for after launch. My path runs from enterprise infrastructure and business workflows to client products and frontend tooling. For True Anomaly, I would bring that connected view of software and operations while learning the product and manufacturing work from your team.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Run a referral-based engineering practice, taking client needs through application design, implementation and ongoing support.

Build tenant-aware services and access-controlled integrations, keeping identity, operational data and production support connected.

Product Engineer (long-term client contract) · NuPrice | 2019-2021

Built and operated a reseller application connecting marketplace and competitor data to user-defined pricing rules, monitoring and analytics.

Owned accounts, subscriptions, billing, embedded support and technical operations; the engagement began alongside FRII and the product was acquired.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Ran the NOC and primary on-call escalations, with sole systems-engineering responsibility during the later part of the tenure.

Migrated workloads from Hyper-V and VMware ESXi to Docker and Kubernetes, modernized servers and firewalls, and ran SOC 1 and SOC 2 audit work.

Systems / Software Engineer · Office Evolution | 2014-2015

Built centralized applications for CRM, provisioning, onboarding and service operations across locations.

Turned cross-department handoffs into explicit workflows and supported the architecture across client environments.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported networks, systems and endpoints for small-business clients, including direct user communication and on-call support.

Built diagnostic and support tooling for recurring problems and used monitoring to guide troubleshooting and recovery.

Infrastructure and Systems Focal · IBM | 2010-2012

Served as an infrastructure focal across enterprise application and customer environments, coordinating changes, incidents and escalations.

Automated audit and backup workflows and managed virtualization test labs and hosted desktop platforms.

03 SELECTED WORK

Technomancy IT platform · Technomancy IT LLC | Ongoing product development

Built a TypeScript/Next.js and PostgreSQL operating layer that connects support tickets with customers, contracts, invoices and infrastructure context.

Designed tenant-aware services to preserve access boundaries; deployment tooling records image identity, applies SQL migrations and checks service health.

ProofMark · Client engineering contribution | Contribution completed

Completed client engineering work on a document-signing workflow, connecting identity, PDF fields, routing and audit history across the interface, APIs and data.

Designed explicit sensitive-state and fallback handling, with webhooks and embedded signing; the work spans React/Next.js, tRPC, PostgreSQL and Rust verification.

Kerf · Independent framework and UI-toolkit work | Early development

Built Kerf's TypeScript/TSX compiler architecture and reusable UI toolkit, with routing, authentication and data-layer work.

In early development, this independent framework provides a place to develop reusable interface patterns and actionable diagnostics for coding agents, alongside my separate React experience.

04 CAPABILITIES

TypeScript · React · Next.js · PostgreSQL · data modeling · API design · integrations · AWS · Docker · CI/CD · Monitoring · incident response
